

Table Tablet Test Launch

Summary

We successfully launch the tablet tabletop test run for 50 customers. Our purpose was to understand how customers engage with the tablets within their typical dining experience.

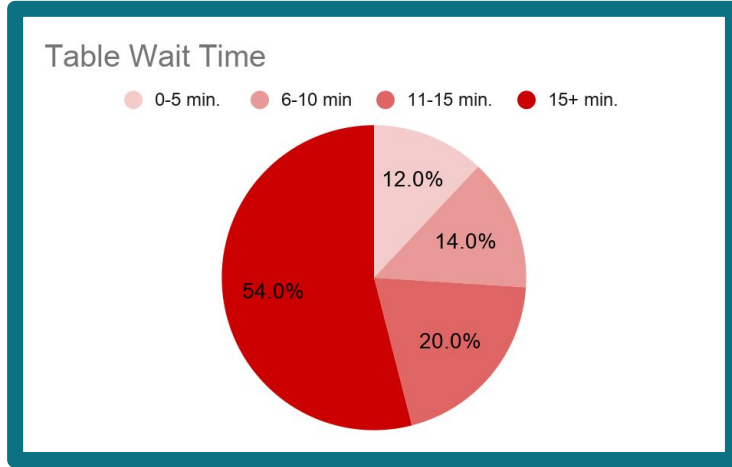

We accomplished the following:

- Invite 100 customers to attend the test launch
- Require customers to utilize the tablet experience to order.
- Send customers digital surveys after the completion of their dining experience

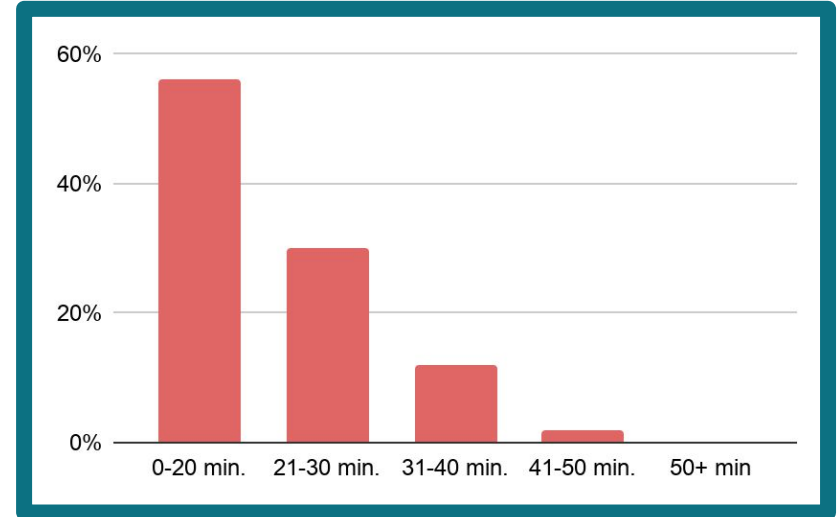

Overview

- Two key areas:
 1. **Customer Satisfaction**
 2. **Ease-Of-Use**
- A few key indicators to evaluate the project test launch included:
 - Minimal server error reports
 - Correct Orders
 - Short Tablet Wait Time
 - Customer Reviews

Findings

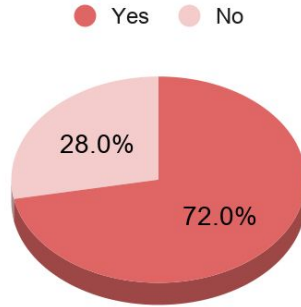

Most Customers had an average wait time of 15min

60% of customers received their order within 20 mins

Findings

Correct Order Received

72% of customers received the orders correctly

Technical Issues

88% of customers had reported technical issues with the tablet

Next Steps

- Incorporate tablets as a part of the dining experience.
- Consider providing customer options when considering dining at Sauce & Spoon.
 - 1: Tablet Ordering
 - 2: Traditional Waiter Ordering
 - 3: Hybrid of both tablet and waiter ordering
- Improve strategies for decreasing table wait time and time receiving food order.
- Adjust tablet navigation to make the process easier for customers.
- Better streamline the process for multiple orders on tablets.

Next Steps

- Implement process for checking tablets before service/ changing out tablets between guests.
- Work with the GMs on speeding up guest visits.
